Hi Tom,

Thank you for the reply. I'll go ahead and look at Digital Ocean and let you know if I need any help with setup.

Thank you,  
Liam W.

Hi Liam,

We don't run production servers for student projects. You can run development servers on users or in the lab but you'll have to ssh tunnel to access them.

You should get a vps on the internet. I suggest digital ocean, but there are others, aws, linode, ssdnodes, etc.

Let me know if you want help, I can walk you through the process of getting a vps on the internet if you want.
