Hello Operator,

I'm a part of a CS 410 class, and we are working on creating an application with a PHP framework named Laravel. We were wondering if it would be possible to host the application some way on the CS server.

Currently, the framework uses things like Node.js, PHP, HTML/CSS/JavaScript. Would it be possible to somehow host the application on the CS server? Or will we have to use some other hosting option?

Liam Willis
