To Liam M Willis <Liam.Willis001@umb.edu>

Hi Liam,

We don't run production servers for student projects. You can run development servers on users or in the lab but you'll have to ssh tunnel to access them.

You should get a vps on the internet. I suggest digital ocean, but there are others, aws, linode, ssdnodes, etc.

Let me know if you want help, I can walk you through the process of getting a vps on the internet if you want.
